Products

- Colocation
- Rack space with dual power supplies and a PDU capable of measuring power consumption
- Cloud Services
- Cloud Computing allows organizations to store data and programs on offsite servers and access them via a secure internet connection
- Allows current IT resources to be more effective and available
- Permits your organization to access more server space, without large capital investments

Managed Services

We work with our clients to develop continuity of operations plans that will work for them. From basic data and server backups, remote hot site to complex support programs, we can provide part of a solution or an end-to-end continuity plan that meets the client's requirements. To meet true end to regulatory or specific operations plans, Resilient has unique assets, including disaster recovery suites, housing, personnel support, evacuation and deployment capability. We design and assist our clients in the development of plans, programs and training based on our real world experience. Our approach allows our clients' businesses to continue to operate effectively in the chaos and challenges of a real world crisis.

Disaster Recovery

Office space contracted per seat, equipped with desk/ table space, phones, and workstation as defined by customer, for continuity of operations recovery.
